

UNIVERSITY OF UTAH
HEALTH CARE

By: Ashton Thomas, Jordan Olsen, Chase Vernon

Our Project Collect scrap metal donate funds to burn center

What is the U of U burn center ?

It is a health care facility that cares for burn victims of serious or life threatening burns

There is one located at the university of Utah hospital

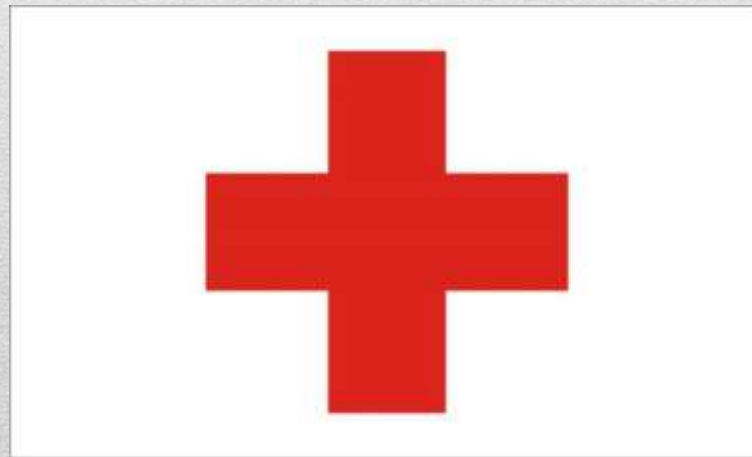

Problem we were working on

- Giving the patients in the U of U burn center better care for how long they are in there. They don't have any protection from infection, and their major protection is burned up making them in care for along time which makes it hard for family and for the patient to be away from home

Why it matters

This problem matters because burn centers don't get as much credit as hospitals do and the care a treatment is long and painful and hard on family's and hard on the patient if it was you I am sure you would want the best care as possible and that's what caught our attention and awareness

What We Did

We raised scrap metal going door to door asking people for any left over cans or any other junk metal that they didn't want we then took the metal that we saved up and took it to Thomas metals where we came out with a profit of 50 dollars donating straight to U of U burn center

How can you help??
